What is BizExplorer?

BizExplorer is a mobile app runtime.

How it works?

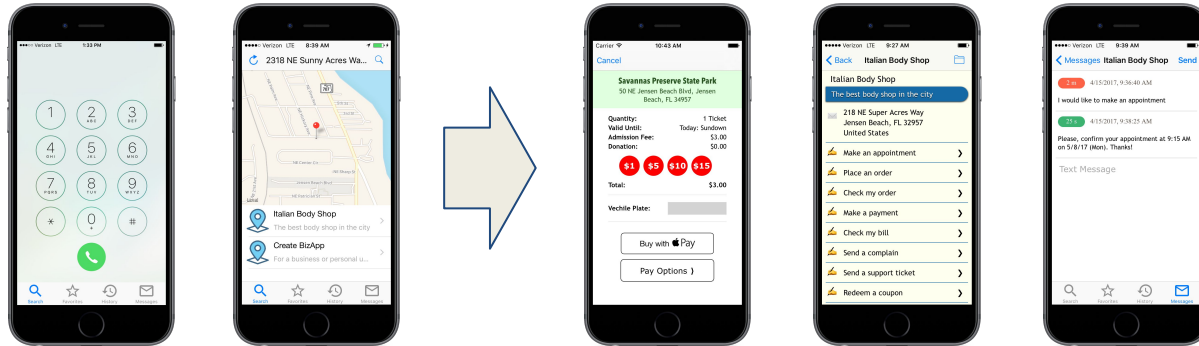

1. Mobile apps are developed with HTML, CSS, JS (PHP, Ruby, etc.) and hosted on a server

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <link type="text/css" href="/root.css" rel="stylesheet">
5   <link type="text/css" href="/manage.css" rel="stylesheet">
6   <script type="text/javascript" src="/root.js"></script>
7 </head>
8 <body>
9   <div id="topbar"></div>
10  <div>
11    <div id="main" style="display: none">
12      <div id="navtabs" class="tabs">
13        <div id="apps-tab" data-focus="true" data-view="myapps" data
14        <div data-view="sales" data-group="navtabs" class="tab" oncl
15        <div data-view="marts" data-group="navtabs" class="tab" oncl
16      </div>
17      <div id="view">
18        <div id="sales" style="display: none">
19          <table class="records">
20            <thead>
21              <tr>
22                <th><input type="checkbox" onchange="OnSaleC
23                <th>Date</th>
24                <th>App</th>
25                <th>Payment</th>
26            </thead>
```

```
1 $PageSetup(function () {});
2
3
4
5 function ResetApps(apps, index) {
6   var menu = new webui.DropButton('apps-menu');
7   if (apps.length == 0) {
8     menu.set('<- Create BizApp', 0);
9     OnAppSelected(null);
10   } else {
11     var selected = menu.value(0);
12     if (selected > index || selected == apps.length) {
13       selected--;
14     }
15     myapps.selectByIndex(selected);
16     for (var i = 0; i < apps.length; i++) {
17       menu.add(apps[i].name, i, (selected == i));
18     }
19     OnAppSelected(apps[selected]);
20   }
21   menu.reset();
22 }
```

How it works?

2. BizExplorer searches and runs mobile apps by a phone #, current GPS location, address, etc.
No installation is required.

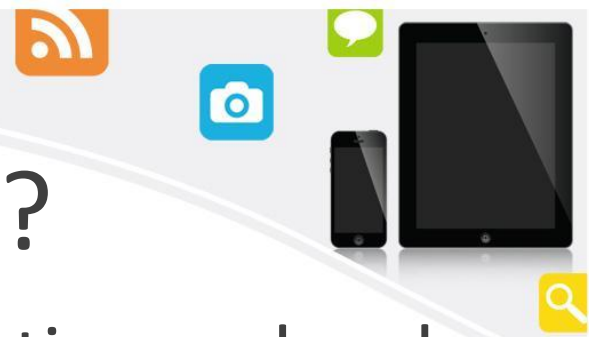

Why BizExplorer?

To close the gap between the native and web

To merge the best of the native and web

- **Leveraging mobile hardware capabilities**
- **Integration with other native apps**
- **No installations & instant updates**
- **One app for all platforms: iOS, Android**

Supported Hardware Capabilities

- ★ Accelerometer
- ★ Compass
- ★ Geolocation
- ★ Push Notifications
- ★ Camera
- ★ File System
- ★ Etc.

Let's build an app now

1. Sign up to <http://bizlect.com>
2. Choose a location and create an app
3. Develop the app
4. Test it in BizExplorer
5. Make it public
